

At St. Andrew's C of E Primary School our aim is to develop lifelong mathematicians who are able to make sense of the world around them through developing their ability to calculate, reason and problem solve. Mathematics is essential to everyday life, critical to science, technology, and engineering and necessary for finial literacy and most forms of employment. A high-quality mathematics education therefore provides a foundation for understanding the world, the ability to reason mathematically, an appreciation of the beauty and power of mathematics, and a sense of enjoyment and curiosity about the subject. We aim to support children to achieve economic well-being and equip them with a range of computational skills and the ability to solve problems in a variety of contexts.

We want our all pupils to:

- **Become fluent** in the fundamentals of mathematics, so that they develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately, including the varied and regular practice of increasingly complex problems over time.
- **Reason mathematically** by following a line of enquiry and develop and present a justification, argument or proof using mathematical language.
- Be able to solve problems by applying their mathematics to a variety of problems with increasing sophistication, including breaking down problems into a series of simpler steps and persevering in seeking solutions

 – including unfamiliar contexts and real-life scenarios.

Maths will be taught in a Mastery style with teachers teaching the skills the children need to learn. At our school, most children will be taught the content from their year group. They will spend time becoming true masters of content, applying and being creative with new knowledge in multiple ways. Teaching will consist of a mixture of fluency, reasoning and problem solving. All three are important and should be shown in books regularly.

Use of appropriate vocabulary is modelled throughout lessons by both staff and children, allowing everyone to 'talk like a mathematician'. Once a child can articulate their understanding of a concept, they can truly begin to make connections within their learning.

Teachers will use hinge points in lessons to understand which children are ready to move on to or to extend their learning in greater depth activities. Conceptual variation and procedural variation are used extensively throughout teaching. Conceptual variation is where the concept is varied and there is intelligent

St. Andrew's Primary School

Maths Curriculum Framework: Intent Document

practice. Procedural variation is where different procedures and/or representations are used to bring about understanding.

This helps to present the mathematics in ways that promote deep, sustainable learning.

Sequence and Structure:

We follow the National Curriculum, which sequences and structures the teaching into the year groups. In order to ensure this curriculum is covered in full and in manageable and logical steps, we follow the White Rose planning in EYFS, KS1 and KS2. The progression is clearly structured and available to see under this <u>'progression' link</u> or by visiting our school website.

Our maths teaching and learning is underpinned by the following key messages*:

- ✓ Everyone can learn maths
- ✓ Mistakes help us to learn
- ✓ Asking questions helps deepen our understanding
- ✓ Maths is about being creative and making connections
- ✓ Maths is about being fluent and flexible
- \checkmark Understanding maths is much more important than how fast you are
- ✓ The steps that you take when finding the answer are just as important as the answer.

*messages developed by Jo Boaler Professor of Mathematics Education, Stanford University

Times Tables:

Times tables need to be practiced regularly to ensure that children both learn and retain all times tables they have learn/ are learning from current and previous years. All children need to be fluent in all times tables by the summer of Year 4. This means they are able to answer both times tables and division facts up to 12x12 in less than 6 seconds. In year 5 and 6 children need to continue to regularly practice times tables to ensure they retain this skill. Times Table Rock Stars is used to support the teaching of times tables

Tables to be known by heart by the end of the year:

St. Andrew's Primary School

Maths Curriculum Framework: Intent Document

Year Group	
1	10x
2	2x 5x 3x
3	4x 8x 6x 11x
4	7x 9x 12x
5	25x revision and fluency, including division facts
6	revision and fluency, including place value

In Reception and Year 1 children will focus heavily on learning number bonds. We have clear expectations for our pupils please see **Appendix 1**.

Appendix 1:

Expectations:

c	By the end of EYFS	By the end of Year 2	By the end of Year 6
	children will be able to:	children will be able to:	children will be able to:
Number and Place Value •	subitise up to 5 verbally count to 20 and beyond. compare qualities up to 10, using the words greater than and less than or the same as	 count in steps of 2, 3, and 5 from 0, and in 10s from any number, forward and backward recognise the place value of each digit in a two-digit number (10s, 1s) identify, represent and estimate numbers using different representations, including the number line compare and order numbers from 0 up to 100; use <, > and = signs read and write numbers to at least 100 in numerals and in words use place value and number facts to solve problems 	 read, write, order and compare numbers up to 10,000,000 and determine the value of each digit round any whole number to a required degree of accuracy use negative numbers in context, and calculate intervals across 0 solve number and practical problems that involve all of the above

 (including subtraction facts) Learn some number bonds to 10 Learn some doubles to 10 Make an equal group make an equal group addition and subtraction using concrete objects and pictorial representations, including those involving numbers, quantities and measures applying their increasing knowledge of mental and written methods

 places multiply one-digit numbers with up to 2 decimal places by whole numbers use written division methods in cases where the answer has up to 2 decimal places solve problems which 						100 and 1,000 giving
 multiply one-digit numbers with up to 2 decimal places by whole numbers use written division methods in cases where the answer has up to 2 decimal places solve problems which 					1	answers up to 3 decimal
 multiply one-digit numbers with up to 2 decimal places by whole numbers use written division methods in cases where the answer has up to 2 decimal places solve problems which 					1	places
numbers with up to 2 decimal places by whole numbers use written division methods in cases where the answer has up to 2 decimal places solve problems which					•	•
 decimal places by whole numbers use written division methods in cases where the answer has up to 2 decimal places solve problems which 						
numbers use written division methods in cases where the answer has up to 2 decimal places solve problems which						
 use written division methods in cases where the answer has up to 2 decimal places solve problems which 					1	
methods in cases where the answer has up to 2 decimal places • solve problems which						
 the answer has up to 2 decimal places solve problems which 					•	
decimal placessolve problems which						
solve problems which					1	
					1	decimal places
					•	solve problems which
						require answers to be

different contexts

	1	
 talk about time. Daytime, night-time. 	 choose and use appropriate standard units to estimate and measure length/height in any direction (m/cm); mass (kg/g); temperature (°C); capacity (litres/ml) to the nearest appropriate unit, using rulers, scales, thermometers and measuring vessels compare and order lengths, mass, volume/capacity and record the results using >, < and = recognise and use symbols for pounds (£) and pence (p); combine amounts to make a particular value find different combinations of coins that equal the same amounts of money solve simple problems in a practical context involving addition and subtraction of money of the same unit, including giving change compare and sequence intervals of time tell and write the time to five minutes, including quarter past/to the hour and draw the hands on a clock face to show these times know the number of minutes in an hour and the number of hours in a day 	 solve problems involving the calculation and conversion of units of measure, using decimal notation up to 3 decimal places where appropriate use, read, write and convert between standard units, converting measurements of length, mass, volume and time from a smaller unit of measure to a larger unit, and vice versa, using decimal notation to up to 3 decimal places convert between miles and kilometres recognise that shapes with the same areas can have different perimeters and vice versa recognise when it is possible to use formulae for area and volume of shapes calculate the area of parallelograms and triangles calculate, estimate and compare volume of cubes and cuboids using standard units, including cubic centimetres (cm³), and extending to other units [for example, mm³ and km³]

Geometry -properties of shape	 name 2D shapes, including square, rectangle, circle and triangle. talk about the properties of 3D shapes 	 identify and describe the properties of 2-D shapes, including the number of sides, and line symmetry in a vertical line identify and describe the properties of 3-D shapes, including the number of edges, vertices and faces identify 2-D shapes on the surface of 3-D shapes, [for example, a circle on a cylinder and a triangle on a pyramid] compare and sort common 2-D and 3-D shapes and everyday objects 	 draw 2-D shapes using given dimensions and angles recognise, describe and build simple 3-D shapes, including making nets compare and classify geometric shapes based on their properties and sizes and find unknown angles in any triangles, quadrilaterals, and regular polygons illustrate and name parts of circles, including radius, diameter and circumference and know that the diameter is twice the radius recognise angles where they meet at a point, are on a straight line, or are
Geometry – position and direction		 order and arrange combinations of mathematical objects in patterns and sequences use mathematical vocabulary to describe position, direction and movement, including movement in a straight line and distinguishing between rotation as a turn and in terms of right angles for quarter, half and three-quarter turns (clockwise and anti- clockwise) 	 vertically opposite, and find missing angles describe positions on the full coordinate grid (all 4 quadrants) draw and translate simple shapes on the coordinate plane, and reflect them in the axes

Statistics	 interpret and construct simple pictograms, tally charts, block diagrams and tables ask and answer simple questions by counting the number of objects in each category and sorting the categories by quantity ask-and-answer questions about totalling and comparing categorical data 	 interpret and construct pie charts and line graphs and use these to solve problems calculate and interpret the mean as an average
Ratio		 solve problems involving the relative sizes of 2 quantities where missing values can be found by using integer multiplication and division facts solve problems involving the calculation of percentages [for example, of measures and such as 15% of 360] and the use of percentages for comparison solve problems involving similar shapes where the scale factor is known or can be found solve problems involving unequal sharing and grouping using knowledge of fractions and multiples

		 use simple formulae generate and describe linear number sequences
Algebra		 express missing number problems algebraically find pairs of numbers that satisfy an equation with 2 unknowns enumerate possibilities of combinations of 2 variables
